Image Cache Utility

Cache Path: [_____] [...]

[Find]   [Fix]

```
\NI73\ NI73-Progress-21.jpg    2017-04-02
\HE14\ HE14-Initial-00.jpg     2017-04-02
\MA26\ MA26-Final-20.jps       2017-04-02

64 images deleted from 21 folders
Log information recorded in
   [Path]\ zero-size-cleanup-log.txt
```

Store output files at cache-path alongside GUID directory

Move files to backup folder for reference?
   No. There's no point. They are empty.
   Just list all filenames, grouped by patient ID, in output text file.

Append to cleanup log with clear separation between runs and statistics in headers/footers

Output field should be copy-pasteable.

Should Find operation add to the log? If yes, above requirement not necessary.

Expand with <u>old</u> file removal feature to make room?
   Yes! Allow user to configure number of files/ volume / age parameters.
   Making room, even temporarily, will help them function.
   Archive/compress? Move rather than delete?
